

Utility Gas Fusers

Job Description:

- Safely and accurately install, repair, test and perform tasks related to construction and maintenance of natural gas distribution systems.

Common Tasks & Obligations:

- Responsible for safely and efficiently installing and testing natural gas facilities.
- Construction will include the new installation of urban & rural mains, services, meters, jumpers and tie-ins.
- Ensure gas lines and equipment are operating properly & be able to test the various gas components.
- Overall assistance to crews doing various tasks to ensure timely project completion.
- All work to be done according to safe work procedures, company work policy, the various utilities' standards, and the Alberta and Canada Electrical Code.

Skills, Abilities & Experience:

- Safety credentials and a safety first attitude (safety orientation will be done upon hiring)
- Drivers License (Class 3 with a clean drivers abstract would be optimal).
- Valid gas fusing ticket.
- Over 5 years' experience in the natural gas utility industry.
- Strong knowledge and understanding of all codes & regulations when applicable.
- Most work will be around Calgary but be prepared for the possibility of travel throughout Alberta.
- Need to be reliable, punctual and willing to learn.
- Hard working, team player dedicated to company success, and just be an overall good person!
